City Manager

Knowledge Management

Knowledge Management is a feature of **Sustainable Brookhaven**, which is a way of governing and managing in pursuit of lasting economic, social, and environmental development that seeks to avoid and prevent the depletion or permanent damage of Brookhaven's resources, which include the environment, built infrastructure, and civic capital that is the DNA of the City.

Policies set and actions taken by the City affect Brookhaven's legacy for current and future residents. The City of Brookhaven emphasizes the importance of sustainability in its operations and uses a framework of five elements to guide its decision making, striving to touch each element in all that it does. With this in mind, Knowledge Management *clearly articulates Brookhaven's position on issues that are recurring, and fundamentally complex*. Each topic below describes the background on each issues, key developments and/or supporting legislation or documentation, and basic messaging points.

The strategy framework for Knowledge Management is to provide guidance to staff so that the City may act consistently and in alignment with the City Charter and various approved master plans as policies are developed and limited resources are prioritized.
